### **DETAILED ACTION**

1. Claims 1-12 are pending.

#### ***Election/Restriction***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to method of making a memory module/circuit, classified in class 711, subclass 170.
  - II. Claim 12, drawn to method of reducing parasitic capacitance of a bus, classified in class 710, subclass 126.
3. The inventions are distinct, each from the other because of the following reasons:

Inventions I - II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case inventions I-II are all different inventions and unrelated to one another. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. A telephone call was made to Eric Nelson on 8/16/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
